## SUMMARY

Full Stack Developer with hands-on experience in designing, developing, and deploying scalable web applications using React.js, Python, and PostgreSQL. Demonstrated ability to build responsive user interfaces, develop RESTful APIs, and integrate machine learning models into production-ready end-to-end web systems. Exposed to the full software development lifecycle, including requirement analysis, development, testing, and deployment. Familiar with Generative AI technologies, including LLMs, LangChain, and RAG, through self-directed learning. Seeking an entry-level Full Stack Developer role to contribute technical skills and deliver high-quality software solutions.

## TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript (ES6+)
- **Frontend Development-** React.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design
- **Backend Development-** Flask, RESTful APIs, FastAPI
- **Database Management** - PostgreSQL, Firebase, Vector Databases
- **Developer Tools** - Git, GitHub, Docker, Linux, VS Code, Vercel, Render
- **Gen-AI (Learning)** - LangChain, LLMs, RAG (Retrieval-Augmented Generation), Embeddings, Ollama, HuggingFace

## EXPERIENCE

### Python Backend Developer — Summer Training

Ziion Technology, Mohali, Punjab | 05/06/2025 – 20/07/2025 | 45 Days

- Built and presented a production-ready REST API using Python and Flask for a web-based application backend.
- Structured RESTful API architecture supporting efficient client-server data communication.
- Optimized server-side workflows and data processing, improving backend code maintainability and performance.
- Diagnosed and resolved backend bugs, improving overall application stability and code structure.
- Contributed to backend engineering supporting CRUD operations and real-time data handling.
- Applied knowledge from this training to independently build MCA capstone project—Loan Repayment Prediction System using Python and Flask.

## PROJECTS

### Boutique Management System - Web Application | Deployed on Render

**Tech Stack:** React.js, Flask, PostgreSQL, Tailwind CSS, REST API

- Architected and launched a complete full-stack web application managing 4 core business modules—customer profiles, order processing, dynamic measurements, and analytics/reporting.
- Architected a responsive React.js dashboard with 20+ reusable UI components, enhancing usability and streamlining workflows across all business modules and reducing onboarding time for new users.

- Developed and integrated 40+ RESTful API endpoints using Flask Blueprints for scalable, maintainable, and secure backend operations.
- Modeled PostgreSQL relational database with 9 tables, optimizing complex data relationships for orders, measurements, and customer records.
- Successfully shipped on Render cloud platform configured via Procfile and environment variables, ensuring high availability and production-ready performance.
- Delivered a complete project from requirement analysis to cloud deployment on Render.

### **Loan Repayment Prediction System - Web Application | MCA Final Year Project**

**Tech Stack:** React.js, Flask, Python, Firebase, Pandas, Scikit-learn, Tailwind CSS

- Constructed a production-ready RESTful API using Python and Flask to serve real-time machine learning predictions for a web-based application.
- Established secure client-server communication by integrating Firebase Authentication for robust token verification and route protection.
- Engineered a server-side data pipeline to validate, scale, and encode incoming JSON payloads before model inference using Pandas and Scikit-learn.
- Integrated Firebase Firestore to persistently log and store user prediction records, ensuring reliable tracking of application data.
- Optimized backend workflows with comprehensive error handling and data validation, significantly improving overall application stability.
- Crafted an interactive React.js frontend with real-time result visualization, prediction history tracking, and PDF export functionality.
- Constructed an admin dashboard to monitor user predictions and feedback in real time.

### **Netflix-GPT — Personal Learning Project (In Progress)**

**Tech Stack:** React.js, Node.js, Google Gemini AI, Firebase, Redux Toolkit, TMDB API, Tailwind CSS

- Developing a Netflix-inspired responsive web application using React.js, Redux Toolkit, and Tailwind CSS integrated with TMDB API, fetching and displaying 100+ real-time movie and series listings across multiple genres.
- Building an intelligent AI recommendation engine using Node.js, Express, and Google Gemini AI to provide personalized movie searches and mood-based suggestions.
- Establishing secure user authentication with registration and login flow using Firebase.
- Applying clean component-based architecture and modern React hooks for a maintainable and scalable codebase.

### **Generative AI & LLM Exploration**

**Tech Stack:** LangChain, Ollama, Docker, HuggingFace

- Built and experimented with RAG pipelines using embeddings and vector search.
- Configured local LLM setups using Ollama and offline AI processing.
- Experimented with AI agent workflows using LangChain.
- Explored integration of LLM APIs to understand real-world AI application development.

## **EDUCATION**

**Master of Computer Applications (MCA)** - Chandigarh Group of Colleges, Landran | I.K. Gujral Punjab Technical University | 2024 – 2026 | CGPA: 7.76

**Bachelor of Computer Applications (BCA)** - Multani Mal Modi College, Patiala | Punjabi University, Patiala | 2021 – 2024 | 75.84%

**12th (Non-Medical)** - Veer Haqiqat Rai Model Sr. Sec. School, Patiala | P.S.E.B | 2018 – 2019 | 65.55%

**10th** - Veer Haqiqat Rai Model Sr. Sec. School, Patiala | P.S.E.B | 2016 – 2017 | 76.46%
